

Abstract of the Disclosure

A motor vehicle includes an assistance device for assisting in a diagnosis, therapy and/or prophylactic treatment on a person who is in the vehicle. An electronic data processing device is for automatically actuating and/or interrogating the assistance device. The assistance device can automatically activate at least one device intended to prompt the person to perform an action, e.g. to take medicaments or to perform a physiological exercise. There can also be an identification device for identifying the person, in order to actuate and/or to interrogate the assistance device on the basis of the result of the identification of the person.
